

royal

ROYAL AI GROUP

Private AI you can verify.
On silicon we own.

\$2.5–3M

First stage of a \$15M plan

The sovereign layer of intelligence.

The most valuable work cannot use AI.

Banks, hospitals, defense, legal, government. Security teams cannot accept a policy document as a control.

27%

ban generative AI outright

61%

restrict which tools staff may use

63%

restrict what data may be entered

They want the AI. They cannot have the AI. That gap is the market.

Cisco 2024 Data Privacy Benchmark Study ·
2,600 professionals · 12 geographies

Trust was the control. Trust failed.

In every case the user owned nothing. Not the data, not the record, not the model.

A policy is not a control. The record belongs to the vendor. The model can be retired. That is the pattern.

MAY 2025 · S.D.N.Y.

Court ordered a provider to preserve chat logs — including those users had deleted.

AUGUST 2025 · ANTHROPIC

Consumer chats used to train the next model may be kept for five years.

AUGUST 2025 · 404 MEDIA

Nearly 100,000 shared ChatGPT conversations indexed by Google, then scraped.

FEBRUARY 2026 · CHANGE.ORG

Model retirement drew a petition of roughly 21,000 signatures. The model still left.

Their answer is a policy. Ours is a receipt.

Written by the vendor.

Enforced by the vendor.

Audited on the vendor’s word.

Changed when the vendor needs data.

A document. Not a control.

Verify on your own laptop.

ENCLAVE Code and seal intact. Not our word.

CLIENT Check runs locally. No permission needed.

CONTROL Verification is what procurement can sign.

The trust conversation becomes a verification conversation. Anyone can run the check. The math does not care about our reputation.

Private GPUs you can prove stayed private.

A private network of GPUs you join like Wi-Fi. Open models inside sealed hardware. Same code, same API shape — change one base URL.

Nothing inside the boundary can be read from outside. Not by us. Not by the datacenter. Not by root. Every call returns a receipt.

We rent you private GPUs, and prove they stayed private.

NETWORK
Royal Private Network Owned silicon · hardware receipt
Enterprise Intranet Dedicated tenancy · region lock
Region-locked Residency you can attest
Public cloud Policy. Shared tenancy.

Receipt attached · TDX + GPU attestation · verified on the client

The whole company runs on one GPU.

Everything live today on a single founder-funded H100 at lugano.ai. Closed. Slow. The attestation chain does not care about speed.

We are not raising to find out whether it works. One GPU cannot serve the queue. Capital buys the fleet.

1 × H100

NVIDIA · founder-funded · lugano.ai · live

ATTESTATION RECEIPT

RUN ON YOUR LAPTOP

SILICON	NVIDIA H100
COUNT	1 · founder-funded
HOST	lugano.ai
QUEUE	Closed

01 TDX	Enclave quote · verified on client
02 GPU	Device certificate · verified on client
03 NONCE	Caller-bound
04 SIGNATURE	Hardware-signed receipt

The check is the product. Time it. The math does not care about our reputation.

One membership. Four sovereignties.

COMPUTE **Sovereign compute.** Private GPUs on silicon we own. The VPN for inference — staff join, work stays inside.

DATA **Sovereign data.** Nothing leaves the seal. A receipt for every call.

IDENTITY **Sovereign identity.** An operator trained on a principal’s knowledge, voice, and boundaries.

MODEL **Sovereign model.** Open models you can keep. No vendor retirement of the mind you hired.

HOW WORK MOVES

ADVISING.COM Agent thinks — knowledge, voice, boundaries.

LUGANO Private inference. Receipt returned.

CHEEZE Agent settles — dollars and euros.

White-label all-in-one for a real house: a club, a hospital, a desk. Coding tools, desktop apps, a suite like Every.to. Lugano privacy badge on everything.

Membership is the simple version. An AI inference stack across an organization. Staff join. Work stays inside.

FIRST TENANTS

The first tenants are already built.

ADVISING.COM

The identity layer

Every principal gets an operator trained on their knowledge, voice, and boundaries. A personal web address. A directory. Built on the Lugano API. Deploys the day capacity exists.

operator trained on the principal · personal address · directory · Lugano API

CHEEZE

The settlement layer

Settlement for agents. Full stack live on testnet. Real dollars and euros in Circle-issued stablecoins. Viable from a \$25,000 engagement down to a fraction of a cent.

testnet live · USDC / EURC rails · \$25,000 → \$0.001

Milestone one after deployment. Not a promise in a diagram. The fleet opens with its first customers in the building.

Each GPU is sold twice.

Reserved once as membership. Metered again as compute. Owned margin, not rented.

MEMBERSHIP	Monthly node, nexus, or cluster. The VPN for inference.
METERED	By the hour, on silicon we own.
INTRANET	Annual seat plus usage. A private network with a receipt.

Pass-through.

Reselling someone else’s silicon. Thin margin. No guarantee we can keep.

The margin we keep.

This is the business. Reserved once, metered again. A factory, not a laboratory.

Private inference is the work 27% of organizations have already banned from the public internet. We sell the thing they are not allowed to rent.

None of this was possible eighteen months ago.

- 01 Confidential compute reached production silicon.
- 02 Agents began acting on real systems, not chat windows.
- 03 Machine-scale settlement became cheap enough to meter.
- 04 Stranded mining GPUs became a fleet you can buy.
- 05 Trust collapsed. Switching got fast. DeepSeek showed the door.

WHY INCUMBENTS STAY

- Revenue.** Labs monetize the data.
- Architecture.** Shared tenancy is the product.
- Incentive.** A vendor cannot protect you from itself.

Owned supply, receipts, network effects. Last-mover permanence.

A decade of cryptographically verifiable systems, pointed at AI.

Sami Rusani

CO-FOUNDER, CO-CHAIR

Sovereign capital access. 100+ investments.

Mickey Hardy

OWNER, ADVISING.COM

The identity layer and its network.

Tristan Thompson

CO-FOUNDER

NBA Champion. Early Anthropic investor.

Brian Evans

CO-FOUNDER, CO-CHAIR

Building with AI since 2018. Inc. 500.

Simon Hudson

FOUNDER, CHEEZE

The settlement layer.

Dmitry Nedospasov

TRUSTED EXECUTION

Publishes TEE exploits. Then asked to build one you can trust.

Head of AI and six more engineers. Engineering budget is shared across layers.

One entity raises.

ISSUER **Royal AI Group** — Delaware C-corporation. The only entity that raises.

LUGANO Wholly owned. Private GPU network.

ADVISING.COM Wholly owned. Agentic operators.

CHEEZE Wholly owned. Agent settlement.

Related party, disclosed. introduction.com sits outside the group, owned by Mickey Hardy and others. It connects people. advising.com gives each an agent.

Token status. No group entity has issued a token. Any future decision will be documented separately. Everything material is on this page.

Founding SAFE · \$2.5–3M

65_{silicon} 20_{engineering} 15_{GTM}

More than 60 cents of every dollar becomes silicon. A factory, not a laboratory.

PAPER	Standard post-money SAFE. MFN. No discounts. No side letters.
CAP	\$30–35M post-money until first close of \$1.5M, then \$35–40M.
STAGE 2	Institutionally led priced round once the fleet is live and pilots convert. SAFE holders convert at their cap.
ASSETS	GPUs as capitalized hardware — depreciable, collateralizable, productive from week one.

WHAT THIS MONEY DOES, IN ORDER

- 01 Purchase orders on first close.
- 02 First region live.
- 03 advising.com closed beta on owned capacity.
- 04 First end-to-end agent transaction after first capacity.
- 05 Lugano pilots convert to paid contracts.
- 06 Third-party audit of the attestation chain.
- 07 Cheeze mainnet.

You can rent a GPU. You cannot rent the margin, the capacity guarantee, or the balance sheet.

And the proof, anyone can check.
