

royal

Private AI you can verify. On silicon we own.

PAPER

Founding SAFE

Standard post-money. MFN. No discounts. No side letters.

The sovereign layer of intelligence. Product is live today on one founder-funded H100. Capital buys the fleet.

THE ASK

\$2.5–3M

First stage of a \$15M plan. First money buys the fleet.

THE SECRET

Policies fail. Receipts sign.

Verifiable private inference. Confidential compute on silicon we own.

The most valuable work cannot use AI.

Banks, hospitals, defense, legal, government. Security teams cannot accept a policy document as a control. They want the AI. They cannot have the AI. That gap is the market.

27%

Ban it outright.

More than one in four organizations have banned generative AI applications, at least for now. The work still has to get done.

61%

Restrict the tools.

Staff may use some products and not others. A whitelist is still a policy. It is not a proof the data stayed inside.

63%

Restrict the data.

Limits on what may be entered. The valuable work is exactly the data they cannot paste into a public model.

They want the AI. They cannot have the AI. That gap is the market.

Cisco 2024 Data Privacy Benchmark Study · 2,600
privacy and security professionals · 12 geographies

Trust was the control. Trust failed.

In every case the user owned nothing. Not the data, not the record, not the model. A policy is not a control. The record belongs to the vendor. The model can be retired.

MAY 2025	S.D.N.Y. — Court ordered a provider to preserve chat logs, including those users had deleted.
AUG 2025	Anthropic — Consumer chats used to train the next model may be kept for five years.
AUG 2025	404 Media — Nearly 100,000 shared ChatGPT conversations indexed by Google, then scraped.
FEB 2026	Change.org — Model retirement drew a petition of roughly 21,000 signatures. The model still left.

The highest-value work in the world cannot use AI because every mainstream provider answers security with a policy. Policies fail.

Their answer is a policy. Ours is a receipt.

POLICY

Written by the vendor.

AUTHOR	The same company that wants the data.
ENFORCEMENT	Internal. You take their word.
AUDIT	On the vendor’s schedule, on the vendor’s paper.
CHANGE	When they need training data, the default moves.
WHAT IT IS	A document. Not a control. Procurement cannot sign a promise.

INFERENCE RECEIPT

HARDWARE - SIGNED

Verify on your own laptop.

ENCLAVE	TDX quote. Code and seal intact.
DEVICE	GPU certificate. Bound to this call.
NONCE	Caller-bound. Not reusable.
SIGNATURE	Hardware-signed. Client checks it.
PERMISSION	None. No vendor portal. No request.
WHO SIGNS	Procurement. Verification is the control.

Private GPUs you can prove stayed private.

A private network of GPUs you join like Wi-Fi. Open models inside sealed hardware. Same code, same API shape — change one base URL. Nothing inside the boundary can be read from outside. Not by us. Not by the datacenter. Not by root. Every call returns a receipt.

NETWORK	Royal Private Network — owned silicon. Hardware receipt. This is the join.
INTRANET	Enterprise tenancy. Dedicated. Region-locked if the contract says so.
REGION	Residency you can attest. Not a flag on a dashboard.
PUBLIC CLOUD	Shared tenancy. Policy. The thing security already rejected.
MEMBERSHIP	The simple version: an AI inference stack across an organization. Staff join. Work stays inside. Like a VPN.

We rent you private GPUs, and prove they stayed private.

The whole company runs on one GPU.

Founder-funded NVIDIA H100. Closed queue. Slow. The attestation chain does not care about speed. We are not raising to find out whether it works. One GPU cannot serve the queue. Capital buys the fleet.

SILICON	NVIDIA H100
HOST	lugano.ai
01 TDX	Enclave quote · verified on client
03 NONCE	Caller-bound

COUNT	1 × — founder-funded
QUEUE	Closed
02 GPU	Device certificate · verified on client
04 SIGNATURE	Hardware-signed receipt

The check is the product. Anyone can run it. The math does not care about our reputation.

One membership. Four sovereignties. A full agentic suite.

COMPUTE	Sovereign compute. Private GPUs on silicon we own. Membership is the VPN for inference.
DATA	Sovereign data. Nothing leaves the seal. A receipt for every call. Lugano privacy badge on everything.
IDENTITY	Sovereign identity. An operator trained on a principal’s knowledge, voice, and boundaries.
MODEL	Sovereign model. Open models you can keep. No vendor retirement of the mind you hired.
ADVISING.COM	Agent thinks — then calls Lugano.
LUGANO	Private inference. Receipt returned.
CHEEZE	Agent settles — dollars and euros on Circle-issued rails.
WHITE-LABEL	All-in-one for a real house: a club, a hospital, a desk. Coding tools, desktop apps, a suite like Every.to.

The first tenants are already built.

Milestone one after deployment. Not a promise in a diagram. The fleet opens with its first customers in the building.

The identity layer

WHAT	Operator trained on the principal’s knowledge, voice, boundaries.
FORM	Personal web address. A directory.
BUILT ON	Lugano API.
WHEN	Deploys the day capacity exists.
WHO	Every principal. The identity layer of the group.

The settlement layer

WHAT	Settlement for agents.
STATE	Full stack live on testnet.
RAILS	Circle-issued USDC and EURC.
SCALE	\$25,000 engagement down to a fraction of a cent.
WHO	Agents that already think on Lugano.

Each GPU is sold twice.

Reserved once as membership. Metered again as compute. Owned margin, not rented.

MEMBERSHIP	Monthly node, nexus, or cluster. The VPN for inference across an organization.
METERED	By the hour, on silicon we own.
INTRANET	Annual seat plus usage. A private network with a receipt.
RENTED	Pass-through. Thin margin. No guarantee we can keep. We do not build this business.
OWNED	The margin we keep. Reserved once, metered again. A factory, not a laboratory.
MARKET	Private inference is the work 27% of organizations have already banned from the public internet. We sell the thing they are not allowed to rent.

None of this was possible eighteen months ago.

01 Confidential compute reached production silicon.

02 Agents began acting on real systems, not chat windows.

03 Machine-scale settlement became cheap enough to meter.

04 Stranded mining GPUs became a fleet you can buy.

05 Trust collapsed. Switching got fast. DeepSeek showed the door.

REVENUE Labs monetize the data. They will not stop.

ARCHITECTURE Shared tenancy is the product. They cannot unshare it.

INCENTIVE A vendor cannot protect you from itself.

LAST MOVER Owned supply, receipts, network effects. Permanence.

A decade of cryptographically verifiable systems, pointed at AI.

Sami Rusani

CO-FOUNDER, CO-CHAIR

Sovereign capital access. 100+ investments.

Simon Hudson

FOUNDER, CHEEZE

The settlement layer.

Brian Evans

CO-FOUNDER, CO-CHAIR

Building with AI since 2018. Inc. 500.

Tristan Thompson

CO-FOUNDER

NBA Champion. Early Anthropic investor.

Mickey Hardy

OWNER, ADVISING.COM

The identity layer and its network.

Dmitry Nedospasov

TRUSTED EXECUTION

Publishes TEE exploits. Then asked to build one you can trust.

Head of AI and six more engineers. Shared across Lugano, advising.com, and Cheeze. The engineer who publishes exploits against trusted execution environments is the right person to build one you are asked to trust.

ENTITY

One entity raises.

ISSUER	Royal AI Group — Delaware C-corporation. The only entity that raises. Subsidiaries wholly owned after merger.
--------	--

LUGANO	Wholly owned. Private GPU network. Receipts. Membership.
--------	--

ADVISING.COM	Wholly owned. Agentic operators. Identity layer.
--------------	--

CHEEZE	Wholly owned. Agent settlement.
--------	---------------------------------

RELATED PARTY	introduction.com sits outside the group, owned by Mickey Hardy and others. It connects people. advising.com gives each an agent. Disclosed here.
---------------	--

TOKEN	No group entity has issued a token. Any future decision will be documented separately.
-------	--

MATERIAL	Everything material is on this page.
----------	--------------------------------------

Founding SAFE · \$2.5–3M

First stage of a \$15M plan. First money buys the fleet. The cap is the reward for being first. More than 60 cents of every dollar becomes silicon.

SILICON	65% — capitalized hardware. Depreciable, collateralizable, productive from week one.
ENGINEERING	20% — shared across Lugano, advising.com, and Cheeze.
GTM	15% — first tenants, first region, first paid contracts.
PAPER	Standard post-money SAFE. MFN. No discounts. No side letters.
CAP	\$30–35M post-money until first close of \$1.5M, then \$35–40M.
STAGE 2	Institutionally led priced round once the fleet is live and pilots convert. SAFE holders convert at their cap.
ORDER	01 Purchase orders on first close. 02 First region live. 03 advising.com closed beta on owned capacity. 04 First end-to-end agent transaction. 05 Pilots convert to paid. 06 Third-party audit of the attestation chain. 07 Cheeze mainnet.

You can rent a GPU. You cannot rent the margin, the capacity guarantee, or the balance sheet.

And the proof, anyone can check.

WRITE

investors@royal.xyz

Royal AI Group. Founding SAFE.

WHAT YOU BUY

The factory.

Owned silicon. Receipts. First tenants already in the building.

WHY FIRST

The cap.

First money buys the fleet. The cap is the reward for being first.
