

royal

Private AI you can verify. On silicon we own.

PAPER

Founding SAFE

Standard post-money. MFN. No discounts. No side letters. One Delaware C-corp raises.

THE ASK

\$2.5–3M

First stage of a \$15M plan. First money buys the fleet. The cap is the reward for being first.

65 silicon • 20 engineering • 15 GTM

THE SECRET

Policies fail. Receipts sign.

Verifiable private inference. Confidential compute on silicon we own. Cryptographic receipts anyone can check.

Live today on one founder-funded H100. Capital buys the fleet.

The most valuable work cannot use AI.

Banks, hospitals, defense, legal, government. Security teams cannot accept a policy document as a control.

27%

Ban it outright.

More than one in four organizations have banned generative AI, at least for now. The work still has to get done.

61%

Restrict the tools.

A whitelist is still a policy. It is not proof the data stayed inside.

63%

Restrict the data.

The valuable work is exactly what they cannot paste into a public model.

Trust was the control. Trust failed.

In every case the user owned nothing. Not the data, not the record, not the model.

MAY 2025 • S.D.N.Y.

Preserve the logs.

Court ordered a provider to keep chat logs — including those users had deleted.

AUG 2025 • ANTHROPIC

Keep them five years.

Consumer chats used to train the next model may be retained for five years.

AUG 2025 • 404 MEDIA

Index the chats.

Nearly 100,000 shared ChatGPT conversations indexed by Google, then scraped.

FEB 2026 • CHANGE.ORG

Retire the model.

A petition of roughly 21,000 signatures. The model still left.

Their answer is a policy. Ours is a receipt.

POLICY · AUTHOR

Written by the vendor.

The same company that wants the data.

POLICY · ENFORCEMENT

Internal.

You take their word. Audit on their paper.

POLICY · CHANGE

When they need data.

The default moves. A document. Not a control.

POLICY · WHO SIGNS

No one serious.

Procurement cannot sign a promise.

INFERENCE RECEIPT

HARDWARE-SIGNED

Verify on your own laptop.

ENCLAVE

TDX quote. Code and seal intact.

DEVICE

GPU certificate. Bound to this call.

NONCE

Caller-bound. Not reusable.

SIGNATURE

Hardware-signed. Client checks it.

PERMISSION

None. No vendor portal.

WHO SIGNS

Procurement. Verification is the control.

Private GPUs you can prove stayed private.

Join like Wi-Fi. Open models inside sealed hardware. Same API — change one base URL. Nothing inside can be read from outside. Every call returns a receipt.

JOIN

Royal Private Network

Owned silicon. Hardware receipt. This is the network you join.

DEDICATED

Enterprise intranet

Dedicated tenancy. Region-locked if the contract says so.

RESIDENCY

Region-locked

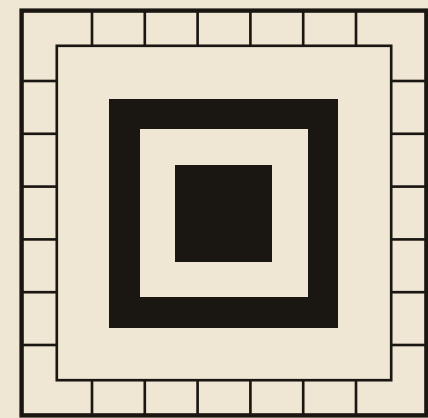

Residency you can attest. Not a flag on a dashboard.

REJECTED

Public cloud

Shared tenancy. Policy. The thing security already refused.

The whole company runs on one GPU.

1 × H100

NVIDIA · founder-funded · lugano.ai · live · closed queue

We are not raising to find out whether it works. One GPU cannot serve the queue. Capital buys the fleet.

ATTESTATION RECEIPT

RUN ON YOUR LAPTOP

SILICON	NVIDIA H100	COUNT	1 · founder-funded	
HOST	lugano.ai	QUEUE	Closed	
01 TDX	Enclave quote · verified on client		02 GPU	Device certificate · verified on client
03 NONCE	Caller-bound		04 SIGNATURE	Hardware-signed receipt

The check is the product. The math does not care about our reputation.

One membership. Four sovereignties.

COMPUTE

Sovereign compute

Private GPUs on silicon we own. Membership is the VPN for inference. Staff join. Work stays inside.

IDENTITY

Sovereign identity

An operator trained on a principal’s knowledge, voice, and boundaries.

ADVISING.COM

Agent thinks — then calls Lugano.

LUGANO

Private inference. Receipt returned.

DATA

Sovereign data

Nothing leaves the seal. A receipt for every call. Lugano privacy badge on everything.

MODEL

Sovereign model

Open models you can keep. No vendor retirement of the mind you hired.

CHEEZE

Agent settles. Dollars and euros.

The first tenants are already built.

Milestone one after deployment. The fleet opens with its first customers in the building.

The identity layer

Every principal gets an operator trained on their knowledge, voice, and boundaries. A personal web address. A directory. Built on the Lugano API. Deploys the day capacity exists.

The settlement layer

Settlement for agents. Full stack live on testnet. Real dollars and euros in Circle-issued USDC and EURC. Viable from a \$25,000 engagement down to a fraction of a cent.

Each GPU is sold twice.

ONCE

Membership

Monthly node, nexus, or cluster. The VPN for inference across an organization.

Enterprise intranet: annual seat plus usage. A private network with a receipt.

AGAIN

Metered compute

By the hour, on silicon we own. Reserved once, metered again.

Owned margin, not rented. A factory, not a laboratory.

NOT THE BUSINESS

Pass-through

Reselling rented capacity. Thin margin. No guarantee we can keep.

Private inference is the work 27% of organizations have already banned from the public internet.

None of this was possible eighteen months ago.

01

Silicon

Confidential compute reached production.

02

Agents

Acting on real systems, not chat windows.

03

Settlement

Cheap enough to meter at machine scale.

04 • 05

Supply + trust

Stranded mining GPUs. Switching got fast. DeepSeek showed the door.

REVENUE

Labs monetize the data. They will not stop.

ARCHITECTURE

Shared tenancy is the product. They cannot unshare it.

INCENTIVE

A vendor cannot protect you from itself. Last-mover permanence.

A decade of cryptographically verifiable systems, pointed at AI.

Sami Rusani

CO-FOUNDER, CO-CHAIR

Sovereign capital access. 100+ investments.

Brian Evans

CO-FOUNDER, CO-CHAIR

Building with AI since 2018. Inc. 500.

Mickey Hardy

OWNER, ADVISING.COM

The identity layer and its network.

Simon Hudson

FOUNDER, CHEEZE

The settlement layer.

Tristan Thompson

CO-FOUNDER

NBA Champion. Early Anthropic investor.

Dmitry Nedospasov

TRUSTED EXECUTION

Publishes TEE exploits. Then asked to build one you can trust. Head of AI and six more engineers, shared across the layers.

ENTITY

One entity raises.

ISSUER

Royal AI Group

Delaware C-corporation. The only entity that raises. Subsidiaries wholly owned after merger.

WHOLLY OWNED

Lugano · advising.com · Cheeze

Private GPU network. Agentic operators. Agent settlement.

RELATED PARTY, DISCLOSED

introduction.com

Sits outside the group, owned by Mickey Hardy and others. Connects people. advising.com gives each an agent.

TOKEN

None issued

No group entity has issued a token. Any future decision documented separately. Everything material is on this page.

THE ASK

Founding SAFE • \$2.5–3M

First stage of a \$15M plan. More than 60 cents of every dollar becomes silicon. A factory, not a laboratory.

65 SILICON				20 ENGINEERING		15 GTM
PAPER		CAP			STAGE 2	
Standard post-money SAFE. MFN. No discounts. No side letters.		\$30–35M post-money until first close of \$1.5M, then \$35–40M.			Institutionally led priced round once the fleet is live and pilots convert. SAFE holders convert at their cap.	
01	02	03	04	05	06	07
Purchase orders on first close.	First region live.	advising.com closed beta on owned capacity.	First end-to-end agent transaction.	Pilots convert to paid.	Third-party audit of the attestation chain.	Cheeze mainnet.

You can rent a GPU. You cannot rent the margin, the capacity guarantee, or the balance sheet.

And the proof, anyone can check.

WRITE

investors@royal.xyz

Royal AI Group. Founding SAFE. August 2026.

WHAT YOU BUY

The factory.

Owned silicon. Receipts. First tenants already in the building.

WHY FIRST

The cap.

First money buys the fleet. The cap is the reward for being first.
