

royal

Your agent, out in the world.

Identity, private compute, and settlement — owned as one stack. The last mover in the age of agents.

PAPER

Post-money SAFE

MFN. No discounts. No side letters. One Delaware C-corp raises.

THE ASK

\$15M · \$60M post

Twenty-five percent of the company. Sixty-five percent of the dollars become silicon.

THE SECRET

Own the front door.

Everyone is building workers. We are building the address the world arrives at — and the sealed mind behind it.

What important truth do very few people agree with you on?

The land grab in agents is not who executes best. It is who owns the front door.

CONSENSUS

Build a better worker.

Manus, Operator, Computer Use. Inward-facing executors. You hand them a task. They commoditize on completion. No structural reason a person keeps one forever.

THE SECRET

Own the arrival.

A person's public face is still a dead page. The valuable work cannot enter a black box. An agent that can think still cannot get paid. Three unsolved primitives. One company.

LAST MOVER

Ship the loop.

Identity finds the work. Sealed compute thinks. The rail settles. Most companies pick one layer and pray. The last mover owns all three — and does not rent the margin.

The personal website is dead.

Nothing built since — Linktree, bio pages, static about-sites — solved what actually matters: being found, reached, and acted on while you sleep.

01 · STATIC

It lies about you.

You built it once, forgot it, and now it is wrong about who you are and what you are open to.

02 · ONE-WAY

Visitors consume.

Almost nothing reaches you unless you handed someone your email and they remembered to use it.

03 · INERT

It cannot act.

It cannot screen, book, price, route, or follow up. It is a poster. Not a representative.

Your next online presence will not be a page you maintain. It will be an agent trained on your real work.

Meet your public agent.

Claim [advising.com/you](#). It learns from what you have actually built — and represents you, inside boundaries you set.

ONE ADDRESS

Replaces four products.

Website. Bio page. Calendar. Press kit.

THE SIGNALS

Five intents. One agent.

Intros. Media. Deals. Paid questions. Invites.

Live today · [advising.com/brian](#)

TRAINED, NOT TYPED

Real work. Not a bio.

It learns from what you shipped.

YOUR RULES

Never interrupted.

Books, routes, answers. You stay in control.

ROYAL AI GROUP

\$15M SAFE · \$60M POST

04 / 16

Do not start with a trillion-dollar market. Start with a room you already convene.

Amazon started with books. We start with principals. Win eighty percent of a small, high-value market — then expand.

THE ROOM

introduction.com

A private network of founders, operators, and investors across New York, San Francisco, Singapore, Hong Kong, and Miami. Three hundred members, chosen from three thousand applicants. Sits outside the group — disclosed, contracted as distribution. Advising gives each member an agent.

THE GRAB

Handles are scarce.

advising.com/you is first-come, permanently assigned. Network-first enrollment. Names are non-fungible. Early principals own theirs. Directory density compounds. This is the atomic network — not a TAM slide.

THEN EXPAND

Adjacent rooms.

Family offices. Law firms. Hospital groups. White-label stacks under their name, on our sealed compute. The first market is a few hundred people who already sit together. That is the point.

Would you hand your life's work to a black box?

Every agent worth having touches what is most proprietary. The largest organizations on earth have decided they cannot run that on infrastructure they cannot audit. So they run nothing at all.

27%

Ban it outright.

More than one in four organizations have banned generative AI, at least for now. The work still has to get done.

Cisco 2024 Data Privacy Benchmark Study

63%

Restrict the data.

The valuable work is exactly what they cannot paste into a public model. A whitelist is still a policy.

2,600 privacy professionals · 12 geographies

0

Receipts they can sign.

A promise of privacy is marketing. Proof of privacy is a contract procurement can put a name on.

The control is cryptographic. Not a policy PDF.

Private AI by proof – not by promise.

Frontier models inside hardware-sealed GPU enclaves. Your data never leaves. You get a signed receipt. Even we cannot see the work.

THE RECEIPT

Hardware-signed.

Ten checks. Every call. TEE, GPU, nonce, policy, signature.

THE POSTURE

Your cloud. Or ours.

On-prem or region-locked. Residency you can attest.

Live today · lugano.ai · one founder-funded H100

THE SWAP

One URL.

OpenAI API. Zero code changes. The product is the proof.

THE RULE

No retention. Ever.

Public key. Receipts verify if Royal disappears.

 *Lugano.ai*

proof.

Unverifiable privacy is just marketing. Lugano.ai is provably private AI infrastructure: any model, cryptographically auditable, zero-trust by default.

REQUEST BRIEFING

VERIFIED PRIVATE AI

✓ TDX quote verified

✓ GPU attestation verified

✓ Proof verification

✓ Constraint check

✓ Nonce binding verified

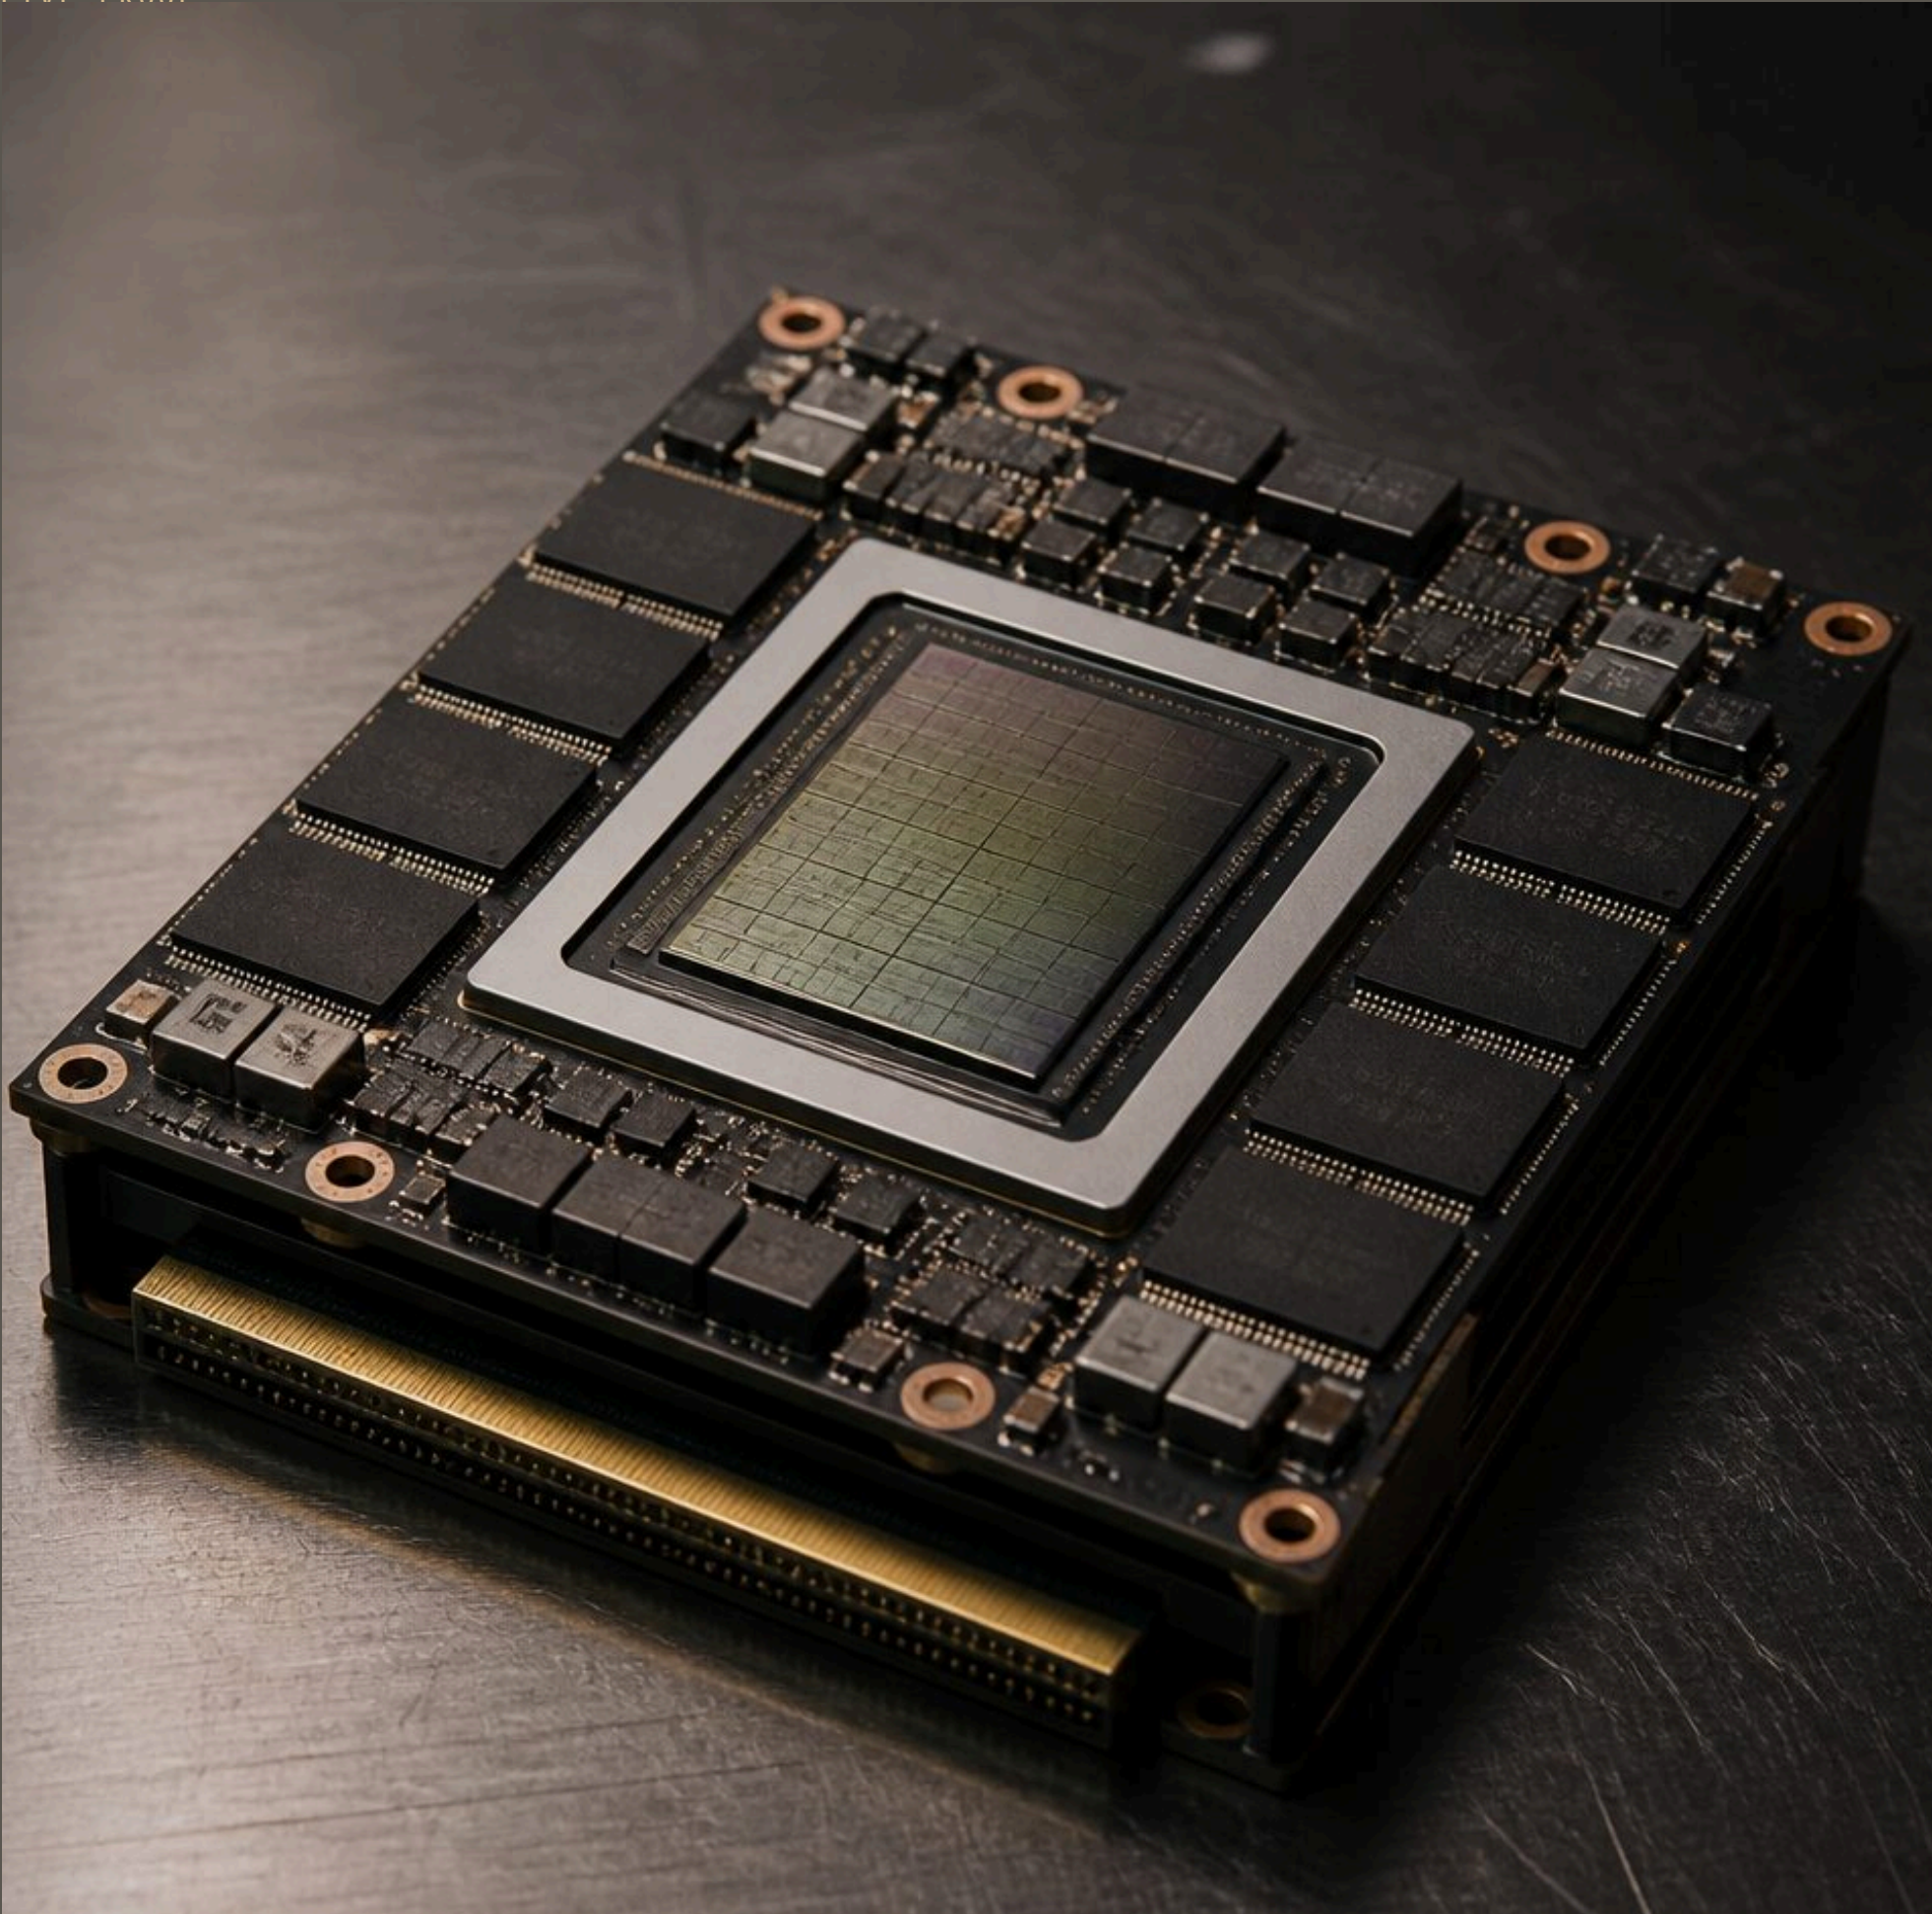

✓ Signing key bound

✓ Receipt verification

✓ Disclosure verification

✓ Payload integrity

✓ No prompt retention

or

ATTESTATION RECEIPT		CLIENT-SIDE VERIFY	
SILICON	NVIDIA H100	COUNT	1 • founder-funded
01 TDX	Enclave quote • verified on client	02 GPU	Device certificate • verified on client
03 NONCE	Caller-bound	04 SIGN	Hardware-signed receipt

Send a query only you know. Watch four checks return. Take the receipt home. Verify the signature against our public key — no Royal systems in the loop. The math does not care about our reputation.

An agent that can find work still cannot get paid.

Cheeze is programmable dollar rails — Circle-issued USDC and EURC — already settling onchain value. Now pointed at the transaction the stack originates.

WHAT IT IS

A rail. Not a token.

Machine-scale settlement, from a \$25,000 retainer down to a fraction of a cent. Agent path is on testnet. Production USDC already moves on the loyalty rail. No group token. Royal never holds customer funds.

WHAT ALREADY SHIPS

USDC, in production.

Cheeze already settles onchain rewards and loyalty in Circle-issued dollars. The same primitive — instant, programmable, global — becomes the rail for human-to-agent and agent-to-agent payments.

WHY IT EXISTS

Close the loop.

Think on Lugano. Settle on Cheeze. Licensed partners handle custody and transmission. Mainnet gates: partner custody audit and a volume threshold. Prior Cheeze seed rolls in at close.

One thesis. Three layers. The loop is the company.

ADVISING.COM

The identity layer

Where demand enters. A public agent at advising.com/you. Discovered, routed, monetized. Handles owned permanently. Directory density compounds.

LUGANO.AI

The private compute layer

Where the mind sits. Verifiable, owned GPU capacity. It makes the public face trustworthy, and keeps the silicon beneath it productive.

CHEEZE.COM

The settlement layer

Where value moves. Programmable rails for the work the stack originates. A cut of every closed loop. Margin never leaves the balance sheet.

Most companies pick one layer and pray an ecosystem grows around them. We ship the loop. That is how you become the last mover — not the first demo.

The companies best placed to build this are structurally unable to.

REVENUE CONFLICT

They earn money from seeing the data.

NVIDIA already sells the TEE. Azure already sells a SKU. Opaque and Tinfoil already wrap the quote. Training on your work is still the lab product. A privacy footnote is not a new incentive.

ARCHITECTURE CONFLICT

Shared tenancy is the business.

Clouds were not built for cryptographic isolation. Retrofitting breaks their unit economics. They will offer a policy. They will not unshare the machine.

INCENTIVE CONFLICT

A vendor cannot protect you from itself.

Owned supply. Distribution we already convene. Verification anyone can check. The GPU spend is the product, not a cost line.

None of this was possible eighteen months ago.

01 · SILICON

Confidential compute reached production.

TEEs on current-generation GPUs turned private inference from a paper into a product.

04 · SUPPLY

Secondary silicon is for sale.

Labs and clouds are rotating fleets. We buy attested Hopper-class-or-newer outright — not rent.

02 · AGENTS

Models crossed into action.

They touch real systems now. The wrong provider seeing the work has a cost.

05 · SWITCH

Buyers will leave a default.

Cost and capability shocks already moved demand. The next switch is the one a CISO can sign.

03 · SETTLEMENT

Payments got cheap enough.

Machine-scale rails clear per call. Metered compute can settle as it runs.

THE WINDOW

All five, at once.

It will not stay open. Last-mover advantage is a timing fact, not a slogan.

We shipped before we raised.

LUGANO · LIVE

One H100. Closed queue.

Founder-funded. OpenAI-compatible API. Ten-check harness per inference. Wallet and key identity live.

ADVISING · LIVE PREVIEW

Handles. Signatures. Pages.

Principals claim a name, define an agent, and publish in minutes. See advising.com/brian.

CHEEZE · RAILS LIVE

Dollars, already moving.

Onchain USDC settlement in market on the loyalty rail. Agent path on testnet. Prior seed rolls in at close.

DISTRIBUTION · IN MOTION

A room, not an ad budget.

introduction.com first. Arcadia GTM. Enterprise and government pilots as cloud nodes, on-prem, and region-locked clusters. References under NDA.

We are not raising to find out whether it works. We are raising because one GPU cannot serve the queue.

The same 80% rule as the market. Most founding teams cover a builder and a talker. Category winners need the other eighty percent in the room on day one.

CEO

Sami Rusani

Co-Founder

Runs the company. Fifteen years at the intersection of AI and capital. Founded 900 Labs. GP at Type3 Capital — licensed corporate-finance adviser. 100+ investments. CCO at Wasder through acquisition. CRO at ShipChain through a \$30M raise. Closes the room. Keeps the cadence.

STRATEGY

Brian Evans

Co-Founder

Sees the category before it has a name. Inc. 500 founder — BDE Ventures, top twenty-five advertising companies in America. Built Influencive. In crypto in 2013, in AI in 2018. Positions the stack. Writes the argument the market will repeat.

MARKETING

Mickey Hardy

Co-Founder

Owns distribution. Founder of Arcadia — GTM behind category-defining launches. Owner of introduction.com, the room we enroll first. Angel in Discord, Databricks, and Epic. The network is not a hire. It is a co-founder.

PRODUCT

Simon Hudson

Co-Founder

Ships. Founder of Cheeze — programmable dollar rails, USDC already in market. Founding team at Streetlife, sold to Nextdoor. A decade of production systems, from brand infrastructure to settlement. Builds the thing people touch.

ACCESS

Tristan Thompson

Co-Founder

Taste, rooms, cultural heat. NBA champion. Early Anthropic investor — in the conversation before it was a category. Opens the doors a Series A associate cannot. The network that does not answer cold email.

Engineering · Dmitry Nedospasov, trusted execution — PhD, IC security, TU Berlin. Publishes TEE exploits; then asked to build one you can trust. Plus six engineers across inference, MLOps, and confidential compute. Shared across all three layers.

\$15M · \$60M post-money SAFE

Twenty-five percent of the company. More than sixty cents of every dollar becomes silicon. A factory, not a laboratory.

65% SILICON · \$9.75M	20% ENGINEERING · \$3.0M	15% GTM · \$2.25M
-----------------------	--------------------------	-------------------

SILICON

Owned. Attested. Productive.

Hopper-class-or-newer, sized to written vendor quotes, multiple regions. Depreciable. Collateralizable. Live from the week it racks. Each GPU sold twice — membership, then metered hours.

ENGINEERING · GTM

Harness. Control plane. Rooms.

Scale the receipt stack across all three layers. Convert pilots to paid contracts, region by region. White-label stacks follow. Advising SaaS and routed-deal fees. Cheeze settlement take-rate.

PAPER · ENTITY

One issuer. Three wholly owned.

Delaware C-corp. Lugano, advising.com, and Cheeze wholly owned at close — prior Cheeze seed rolls in. introduction.com remains outside, on a written distribution agreement. No token. No side letters.

royal

You can rent a GPU. You cannot rent the margin, the capacity guarantee, or the balance sheet.

And the proof, anyone can check.

WRITE

investors@royal.xyz

Royal AI Group. \$15M SAFE. \$60M post. August 2026.

WHAT YOU BUY

The loop.

The front door. The sealed mind. The rail. Silicon you own.

WHY NOW

The window.

Five conditions, one moment. Last mover is a timing fact.
